“

Welcome to Environexus. A world where everyday devices become amazingly intelligent.

It's a simple approach that allows you to take the things that surround you and make them part of a connected network that can be controlled through your smartphone or tablet. It really is that easy, and surprisingly affordable.

The full range of retro-fit devices will open a new world of connectivity for lights, appliances, locks, sensors and much more.

Dimming

Turning lights on and off isn't enough any more. You need to set them to just the right brightness to have the perfect ambiance. You'll be able to dim all compatible bulbs.

Scene control

Rooms generally don't have just one device. That's why every Environexus device can be part of a scene, allowing you to group lights together so they work in sync and talk to each other effortlessly.

Schedule

Some days of your life run to a schedule, and each Environexus device can be a part of it. From turning on your lights to the perfect level as you wake up, to ensuring that they're turned off after you've left, consider them a butler for your lights, comfort and safety.

Energy Monitoring

Record and understand just how much money your home and devices are costing you, and then use the Environexus Energy Dashboard to save energy and reduce your bills.

Access Anywhere Control

Wifi enabled lighting control is just the beginning. Your smartphone is generally on you at all times, so Environexus has integrated access anywhere control over 3G.

Wireless Mesh

Along with all its other benefits, each Environexus Device is enhanced with mesh technology. Wireless signals get lost. Mesh signals don't. Each device acts as part of a mesh network, receiving, and repeating signals with other Environexus devices.

Retro Fit

Environexus can be deployed in a fraction of the time traditional automation solutions require. Simply remove your existing switches, connect the cables and add the device to your network.

Notifications

Receive email notifications from any Environexus device within the home. Notifications can be sent when a scene is run, a sensor is tripped or when the kids return from school.

Scalable

With an option to add 250 devices to a single gateway, the Environexus system becomes scalable enough for both residential and commercial applications, whilst also remaining completely secure.
