

Rip Curl

SOLAR POWER & LED LIGHTING SOLUTION

The Middy's TechEnergy Team recently delivered a Solar Energy Install and LED Lighting Upgrade at one of Rip Curl's warehouses in Torquay, Victoria. The install supports one of Rip Curl's 5 Brand Values 'Community & Environment'. Rip Curl are always looking at ways to minimise their impact on the environment. They feel it is important to be environmentally friendly in the local community. The Middy's TechEnergy solution aims to maximise Rip Curl's return on investment and provide a multi technology strategy.

SOLAR

INSTALLATION

LED LIGHTING

UPGRADE

► Onsite Solar installation results in significant cost savings and offsets power price increases

► Replaced all conventional, high power consuming, internal and external light fittings with a quality, energy efficient LED solution

We are extremely satisfied with the quality of the system and the tradesmen. Leigh Stacey, our TechEnergy Sales Representative, went above and beyond to understand our needs, ensure we were happy and that we got what we paid for. His Customer Service was first class. I recommend Leigh and Middy's whenever possible.
