HOME AUTOMATION SYSTEM INSTALL

Middy's customer, Scott Greatrex (Director, GEN2 Power) owns a remote rural property, one hour from Adelaide. Scott was looking to automate his two-storey home. He wanted to be able to remotely turn on air conditioning prior to arrival and automate the home to meet his family's expectations and to match their lifestyle. The Middy's TechEnergy team worked with Scott to install a FIBARO Home Automation System. This included Air Conditioning control, SONOS sound system, garage door opener, ceiling fans, lighting and access control.

The ability to set up the system to activate prior to arrival at the property was a key requirement that the Middy's TechEnergy team met. The owners can now set the heating/cooling to come on when they leave Adelaide. Have the lights on in key areas of the house when they arrive late and an automated garage door opens as they pull up in the driveway. All controls are via the FIBARO app, making their newly automated home very user friendly. Scott is looking at adding a CCTV camera system which can be incorporated into the FIBARO app in the near future.

THE INSTALL: ALL CONTROLLED VIA FIBARO APP

The old fashioned service proposition that was offered and the commitment to make it right was so refreshing. Paul Glassenbury from the Middy's TechEnergy team was totally hands on with all decisions. His solution-based approach was a delight, it made our decision-making much easier. He worked effortlessly to help create an all-encompassing solution to every question and request and even took after hours phone calls and a Saturday morning road trip to ensure the system was operational in time for a large family event at the property. Our expectations have been exceeded and we are delighted with the result. We utilise the system regularly and love that we can option it up and add items to the system as we go.

Scott Greatrex Director, GEN2 POWER
